KITCHEN & RESTAURANT

Enjoyment with an explosion of flavors

THE WATER REVOLUTION!

ACCORDING TO OUR CUSTOMERS

„All drinks and food develop a tasty flavor.“

Pure taste

About two to three litres per day is the recommended intake of water. But it is not only the quantity which is decisive but also, and in particular, the quality of the cool liquid. Invigorated and activated water is pure life energy and enjoyment. A balanced and healthy diet is based, among other things, on the use of high-quality water. People who maintain a balanced diet and pay attention to their quality of life are also demanding when it comes to the quality of their water.

Made to suit your taste

Did you know that we humans can differentiate between ten thousand different aromas? Not without reason is an “explosion of flavours” referred to in this context. All aromas and ingredients can develop to their full extent in modified aquaSpin water.

Re-discover aroma!

Simply do something for your well-being. Stay relaxed and still have a clear conscience regarding the environment. Enjoy with all your senses and still have a good feeling. Energy-rich and invigorated water convinces through its fine taste, easy digestibility and long shelf-life.

Enjoyment Cooking Flavors DURABILITY Explosion of flavors

It is for this very reason that lovers of coffee and tea swear by soft, fresh and invigorated water. This guarantees exceptional drinking enjoyment and all foodstuffs become part of an incomparable taste experience.

Water determines the quality

A very important component of our daily diet is top quality and well-prepared food. We place high demands for this on cooks and restaurateurs.

In the home, canteens and large-scale kitchens water also has a very big influence on the quality of the meals as the basis of the foodstuffs. With aquaSpin water all foods taste finer and all ingredients fresher, more aromatic and retain their original taste.

All meals prepared with aquaSpin water develop a more marked and full-bodied taste experience. Herbs, vegetables and fruit stay longer fresh. Coffee and tea also taste finer and develop a more intensive aroma.

Lower consumption and cost saving

In the commercial sector a reduced consumption of detergents and cleaning agents can be seen. Production is carried out in an ecological and environmentally-friendly manner. All machines and devices which are used with water are given a better limescale protection, require less effort to clean and there is a reduction in limescale deposits in all equipment, piping and boiler systems.

The positive consequence: Longer lifetime of devices such as coffee machines, washing machines and heat exchangers and a significant cost reduction for repairs and maintenance.

All parts which transport water, such as nozzles and conveyor belts, remain fully functional over a longer period. Combination steamers, heated wells and coffee makers are protected over the long term.

Development ENERGY

“Our guests are showing us something today – something that they know from the media: a healthy diet, restorative sleep and sustainable products that are offered in the hotel. And this is what we’ve somewhat devoted ourselves to. We no longer serve mineral water to our guests in the conference area. Instead, we only offer our water, from our pipe.“

Mr. Döbbeler - Hotel am Schlosspark from Gotha
